## Professional Summary

Automation Test Engineer with around 3 years of experience in UI automation, API testing, and manual testing. Strong experience in Selenium WebDriver with Java, Cucumber BDD framework, TestNG, and Maven. Skilled in API testing using Postman, CI/CD integration with Jenkins, and defect tracking using JIRA in Agile environments.

## Professional Synopsis

- 3 years of experience in Automation and Manual Testing across web applications.
- Hands-on experience with Selenium WebDriver using Java.
- Experience in building automation frameworks using Cucumber BDD, TestNG, Maven, and Page Object Model.
- Skilled in API testing using Postman with JSON validation and request chaining.
- Experience in defect tracking and test management using JIRA.
- Good understanding of SDLC, STLC, and Agile Scrum methodology.
- Experience working with Git for version control and Jenkins for CI/CD integration.
- Knowledge of SQL queries for backend data validation.
- Experience handling dynamic elements, waits, alerts, iframes, and multiple windows in Selenium.
- Skilled in handling dynamic elements using XPath, CSS selectors, waits, and JavaScriptExecutor.
- Worked closely with DevOps to run and monitor automated tests in CI/CD environments.
- Performed various testing types: Smoke, Sanity, Functional Testing.

## Technical Skills

- Automation Tools: Selenium WebDriver, PostMan.
- Programming Languages: Java, SQL
- Frameworks: Cucumber BDD, TestNG, Maven, Page Object Model (POM)

- API Testing: Postman, JSON validation, request chaining
- CI/CD: Jenkins
- Version Control: Git, GitHub
- Bug Tracking: JIRA
- Security Testing: OWASP ZAP
- Testing Types: Smoke, Sanity, Functional, Regression Testing.

## Professional Experience

Automation Test Engineer

Techbeez Software Technologies Pvt Ltd |

March 2023 – Present

### Responsibilities

- Develop and maintain automation scripts using Selenium WebDriver with Java.
- Design automated test cases using Page Object Model framework.
- Implement BDD framework using Cucumber integrated with TestNG and Maven.
- Execute regression, smoke, and functional test suites.
- Perform API testing using Postman and validate responses using JSON.
- Log, track, and manage defects using JIRA.
- Validate backend data using SQL queries.
